Issue Date   18/08/2015

How to install and configure a PEC 9000 Vertical LHS Display (92911)

NB:- The config mode replaces the old DIP Switch setting on the old CEEPEC displays.
If these setting are not configured, the displays will not function correctly.

- Install the 92911 Display in the bowser and re apply the 240VAC supply power.
- Enter the config mode by pressing and holding the "Fill" key on the Preset Keypad until "PIN?" appears in the Dollar LCD on the RHS Display.
- Enter the pin code 1, 2, 3, 9
- To Navigate the menus, use the 2 and 8 key to scroll through the different settings, and 4 & 6 to change the values

Every display will need to have the following setup :-

- Side   (Front, Rear, Mimic)
- Config   (Auto or User)
- Model   (Dual, Trio, 1MPD, 2MPD, 3MPD, 4MPD
- Totes   (Show or Hide)
- 6 DIG   (No or Yes)
- Mode   (Native or Retro)
- Price   (Cents or Dllrs)
- LPG   (No or Yes)

Once you have configured all the settings, press "fill" to save and exit the config mode.
